Published Paper: -

- TypeSafeAI's Jev Emulator + N8N + Ollama Integration
- Building a Production RAG Pipeline using Upstash React, Node, Vector DB, Groq & GEMINI API & Vercel
- Optimizing Multi-Branch CI/CD Pipelines & Deployment Isolation in Vercel

Certifications:

- LOT-959 - IBM WebSphere Portal 6.1 Application Developments Certified
- ITIL® Foundation Certificate in IT Service Management
- AZ-300 - Azure Architect Technologies
- Oracle Fusion Cloud Applications HCM Process Essentials Certified (**Dec 2025**)
- Oracle Global Human Resource Cloud 2025 Certified Implementation Professional (**Feb 2026**)
- Oracle Payroll Cloud 2026 Certified Implementation Professional (**Jun 2026**)
- Oracle Cloud Infrastructure Certified Enterprise AI Professional (**July 2026**)
- Claude Certified Associates – Foundation (**Aug 2026**)

Professional Profile:

A brief introduction

18+ years of experience in IT Industry, currently working as a **Technical Delivery Manager**, currently working on setting up a team for **Oracle Apps, Oracle Retail** AMS & Implementation project. Previously, I helped build up a 30+ member team for multiple applications (Oracle & Non-Oracle Apps) across 8 different tracks. Planning & working on detailed Transition planning, resourcing, financials, customer engagements and other related activities as a part of pre transition readiness.

Have managed complex projects deliverables, along with customer engagements on different business requirements, new businesses / RFP, daily connect on project status, handling escalations and maintaining customer relationship. Managing more than 10+ medium to complicated projects for one of the largest firms in the world (MAANG and in Payment's domain), working closely with business (frequent travel / working from customer offices in BLR/HYD) helped me gain a lot of knowledge and understood business needs & the thought process thoroughly.
Apart from Delivery Manager, I have had experience working as a Technical Project Manager / Lead, Delivery Lead (Concur), Technical Scrum Master (Guidewire (CC)), UI consultant / lead across multiple domains & projects throughout my career till date.
I am a FOSS (free and open-source software) enthusiast and have experience working as an UI Architect / Consultant in many projects. I, still work / do my research on multiple UI framework, tools etc. and has plan to contribute to the community as an open-sourced contributor if possible.

AI Leadership & Enterprise Engineering

Actively expanding delivery leadership into applied enterprise AI, combining hands-on direction of AI development tooling, local LLM orchestration, evaluation frameworks, and formal certifications. Directed and reviewed a multi-agent, AI-assisted software modernization initiative—using Claude and GitHub Copilot in a structured, human-governed workflow—to upgrade a production React/MUI codebase, embed PII/security review gates, and reduce page image payloads by over 90%, culminating in a white paper on human-orchestrated development patterns. Certified in Oracle Cloud Infrastructure Enterprise AI (1Z0-1158-26) and Claude Certified Associate Foundations, with extensive hands-on execution across local containerized AI workflows, decision-model testing, and cross-platform automation.

- **Multi-Agent Orchestration & Governance:** Directed multi-agent modernization workflows using Claude and GitHub Copilot; embedded security/PII governance gates, optimized frontend asset performance (>90% payload reduction), and authored architectural white papers extending human-in-the-loop patterns to CI/CD and Oracle Retail AMS lifecycles.
- **Local LLM & Workflow Automation Architecture:** Designed and deployed containerized, local AI workflows using **Docker, n8n, and Ollama**; integrated vector search nodes, custom memory modules, structured Pydantic outputs, Function/Tool Calling, and automated benchmark/logging pipelines for local inference performance.
- **Model Evaluation & Benchmarking (JEV vs. Ollama + APIs):** Conducted performance, latency, and accuracy benchmarking of fast decision-model emulation (**JEV Emulator**) against local generative LLMs integrated with external knowledge tools (**Ollama + Wikipedia API**); evaluated trade-offs between deterministic/probability-weighted structured decisions and open-ended generative tool-calling pipelines.
- **Production RAG & Web Application Deployment:** Architected and deployed an interactive portfolio application and custom **Retrieval-Augmented Generation (RAG)** chatbot to production on **Vercel / GitHub Pages**; configured Open Graph metadata, web app manifest standards, and progressive web app (PWA) capabilities.
- **Context Management & API Optimization:** Implemented state-management patterns for multi-turn stateless API interactions, including FIFO sliding-window context pruning, rolling summary memory, token budget optimization, and Model Context Protocol (MCP) concepts.
- **Cross-Platform Integration & Upskilling:** Built native iOS Shortcuts leveraging cloud LLM APIs to automate calendar event extraction and daily synthesis. Achieved **Oracle Cloud Infrastructure Enterprise AI Professional (2026)** and **Claude Certified Associate – Foundations**, alongside study in embedding search, transformer architectures, and Databricks.
- **Data Analysis & Dashboard testing with NAO agent and Mistral AI.**

Added Points: -

I have solid experience leading and managing large to medium, complex to moderate scale Development and support & maintenance projects; much efficient in handling clients globally and any critical/escalated situations. It's always been my focus to bring new business on board by maintaining cordial relationship with clients and provide top notch delivery, maintaining product quality as per given company standard. Apart from day-to-day delivery, I always believe, '**Innovation is the key'** ideology which makes me always thrive to work on implementing new ideas / innovation to help grow both the consumer and service provider.

Technologies and Tools –

Oracle Cloud Fusion HCM (R13), Oracle Retail
AI Tools :- Claude, Codex, Antigravity , Cursor, Umami, Ollama , LiteLLM
Salesforce: - Admin, Service Cloud, Sales Cloud, Apex , LWC
UI programming and Framework – HTML5, Bootstrap, CSS3, SCSS, Material JS, Tailwaind
Java Script Library and Framework - jQuery, Angular 2.x, 5, Redux, React JS, VUE JS, NEXT JS
Container Services:- Docker, K8S
CI/CD and Version control – VSTS, GIT, Bitbucket, Azure pipelines
TDD - Karma / Jasmine / Mocha / Enzyme
Deployment Tool – UCD, Git Pages, Vercel
Cloud – Azure, Bluemix, AWS
Agile and KANBAN Tool – JIRA, Confluence, MURAL
Task runner build tools - Well versed with NPM, CLI, YARN. Also worked on GULP and Webpack
NoSQL DB – Mongo

Products - Guidewire, Concur

Employment History

Duration: Jul 2025 - Present

Tata Consultancy Services

Client: Global Retail Customer

Role: Technical Delivery Manager, UI Consultant

Responsibilities: -

1. Working on setting up **200+** team (Phase by phase) for AMS (E2E Managed Services) for multiple applications across 8 different towers under corporate section of Customer.
2. I am focusing on building Enterprise Systems track where we have 30+ applications along with different tech stack and of 28 total team members. This track has the more niche skills requirement and complicated finance related applications.
3. Leading the Gen-AI & Automation activities at account level.
4. Post GCC setup, a full-fledged transition activity has been initiated. I'm working on creating the transition plan and targeting to complete by Oct'25.
5. E2E Transition planning, resourcing, KT, Customer engagement & other related activities.
6. Closely working on internal hiring and resourcing team on fulfilling the urgent open demands on multiple technology stacks.
7. Sharing daily status with internal leadership and customer team on the transition progress.
8. In parallel, as an UI architect, I am involved in multiple POCs where I share estimation, involved in RFP and technical discussions.

Duration: Feb 2023 – Jun 2025

Tata Consultancy Services

Client: MAANG Company (Payments Domain)

Role : Technical Delivery Manager

Responsibilities: -

Technical Activities & involvement: -

1. Set up 5-member team of **Salesforce** as per customer requirements from scratch. It was quite a challenging open demand fulfilment but I completed that within shorter period of time.

2. Helped customer and internal team with e2e on boarding processes.
3. Started my technical salesforce journey from April 2024 onwards and got into internal rigorous salesforce training for few months.
4. Got trained on Salesforce Admin, Service Clouds along with moderate knowledge on APEX and LWC.
5. Was able to grasp LWC quite easily as I have a strong UI development background.
6. Hands on activities on
    - Auto-assign high priority cases to a specific queue, configure email-to-case and route to a specific support group & trigger emails.
    - Created record trigger flows, Screen flows on different customized requirements.
    - Using Record & Screen flows, created end to end onboarding screens & related process i.e. screen to enter user details, assign sales rep dynamically from list, create a follow up tasks along with date picker, add notes and send a welcome email to the users. As a final screen, either it will show confirm or error messages.
    - Created Omni Channel from scratch.
    - Data import , milestone , SLA , case creation & assignment, knowledge articles etc.
    - Create a separate screen on getting customer feedback / surveys.
    - Create a customized table and display related data as per requirement using LWC. Display account records, related opportunities using checkbox.

As an UI Consultant / SME :-

- Worked on multiple RFPs / Solution activities and provide my suggestions from UI perspective.
- Created / Designed screens using the Wireframes provided using React + Material JS.
- Provided e2e architecture / flows on application performance & security. – This is my current focus area.
- Provided multiple ideas on AI integrations and automation.

Management: -

1. **New Business Opportunities / RFP**:- As a DM, one of my focus areas is to work on new business opportunities in the term of RFPs received from customers. Analyze & understand the requirements, screening technical profiles and having internal mocks before appearing customer evaluation process, coordination with customer and internal teams on new on-boardings for new candidates e2e. In this way, I had successfully on boarded more than 35+ new resources for the account & set up 6+ teams from scratch.

2. **Project documentations and processes**: - Prepared SOW / WO , get it verified with Customer after multiple iterations, working with internal legal team to make sure the document is reviewed from legal perspective and signed by both the parties before we start the project. Once the SOW is signed, I worked with Customer to get the PO and with internal PMO team on billing processes.

3. **Open Demands Fulfilment**: - This is one of the most challenging area I have had ever faced. Considering the level of interview process and standard, it was quite challenging to prepare internal team for CE considering the rejection rate is quite high. However, I worked closely and rigorously with required teams, Customers, POCs and successfully set up multiple teams from scratch.

4. **Program Management**: - I had handled more than 11 complex projects / programs of tech stack like Java FS, UI, Salesforce & QA Practice. Daily / weekly / Bi-weekly / monthly connect with Customers, Internal teams, leadership teams to share project status, discuss on challenges and handled multiple escalations and help team to make sure everything function smoothly. I have managed FP & T&M projects.

5. **Stakeholder Management**:- Communication being one of my strongest skills, I have been efficiently managing customer relations & able to build cordial working relationships with Business. I worked as a SPOC & Liaison b/w Customer and TCS where customer directly reached out to me for any business needs, new opportunities, escalations and other project related issues.

6. **Financials** :- One of the focus areas for me has always been the financial part where I need to prepare monthly billing, get it approved by customer and make sure to generate monthly invoices on time. Working on projections, with customer and internal POCs on the multiple POs , Add on PO balances and make sure all the insufficient balances are dully topped up on time so that billing can be completed on time.

7. **Organizational Contributions**: - I have been engaged / involved in multiple internal organizational / account related activities.

Duration: Apr 2021 – Feb 2023

Tata Consultancy Services

Client: US Based Retail Company

Roles and Responsibilities :-

1. **Techincal Project Lead (March 2022 – Jan 2023)**
    - End to End transition Management
    - Build team in Mexico from scratch
    - Lead cross cultural team
    - Project delivery planning, coordination, stakeholder management to make sure of on time deliverables.
    - Technical solutions / assistance to the internal dev team
    - Implement best practices and knowledge base

2. **Data Migration from Teradata to Google Big Query (Sep 2021 – Feb 2022)**
    - Clear understanding of requirements & functionalities.
    - Query implementations / modifications to migrate data from TD to BQ
    - VB Code formatting to make sure the code works fine while executing through queries
    - Debugging by checking logs in Azure and fixing errors in reports.
    - Validating big queries in Google BQ console
    - Write SQL queries to fetch reports on demands
    - Data Validation and E2E Integration testing

3. **API Integration (Apr 2021 – Sep 2021)**
    - Understanding the workflow and UI Code (React & Redux)
    - Successfully able to integrate multiple APIs and tested in multiple environments
    - Validating every APIs and highlight if there are
    - Test the APIs in different environments

Duration: Jan-2020 – Apr 2021

Cognizant Technology Solutions

Client: Australia based Insurance Company

Designation: Technical Product Consultant, SCRUM Master

Roles and responsibilities

As a Technical Product Consultant (1 year)

- **Led the design and development of end-to-end ClaimCenter outbound document integrations**, ensuring seamless communication with downstream systems and compliance with enterprise standards.
- **Configured and optimized GSCAN** for automated document generation and reporting, improving accuracy and reducing manual effort.
- Experience in **ClaimCenter Data Model extensions, entity configuration, and PCF (Page Configuration Format)** updates to support business requirements.
- Developed and maintained **Guidewire Message Queues and Batch Jobs**, enhancing system performance and scalability for high-volume claims processing.
- Actively involved in **Agile delivery**: contributed to **User Stories, Defects, Sprint Planning, and Peer Reviews**, while mentoring team members in **complex GOSU coding and debugging scenarios**.
- Hands-on experience with **UCD (Urban Code Deploy)**; successfully performed deployments across **DEV, QA, SIT, and PERF environments**, ensuring stable and consistent releases.
- **Collaborated in Agile delivery model** – contributed to story refinement, defect resolution, and mentoring team members in resolving complex technical challenges.
- Applied **version control best practices** using Bitbucket and SourceTree for branching, merging, and pull requests, improving team collaboration and release efficiency.
- Conducted **deep debugging, code analysis, and defect fixing**, with a focus on document integration issues.
- Executed **unit testing and defect triage**, ensuring high-quality deliverables tracked through JIRA.

As a SCRUM Master

- Facilitating daily Scrum / Stand-up calls.
- Ensuring that goals, scope, and product domain are understood by everyone on the Scrum Team as well as possible.
- Effective Product Backlog management along with Sprint Planning. Helping the team understand the need for clear and concise Product Backlog items.
- Update JIRA board every day and coach other team members to follow the same and maintain best practice.
- Performed multiple learning sessions with team members to understand JIRA and the JIRA processes.
- Productive Defect Management process. Properly update every defects with RCA and other parameters and
- Monthly retrospective calls to analyse what went well and how could we do better scenarios.
- Facilitating ad-hoc technical meetings events as requested or needed.

- **Jan'2019–Jan'2020**

Client: UK Based education organization, UK

Cognizant Technology Solutions

Designation: Manager - Projects

Roles and responsibilities

- Have been working as a Project manager, managing more than 120 applications and around 30 member's team (off shore + on site).
- Implemented KANBAN in application support and maintenance area space using Microsoft team to ensure seamless digitized movement into Cloud.
- Managing six technology towers i.e. Java, Oracle, .NET, DELPHI, Python and Security applications
- Ensure smooth deliveries of 120 applications. Make sure all the day to day support activities are going without any challenges as well as enhancement works
- Managing and tracking few ADSO projects
- Finding out the pain areas and fix them
- Implement best practices and help team with new ideas / innovations
- People Management
- Handling audit
- Ensure good relationship with clients. Active participation during client visit.
- Maintain Onshore and offshore team synergy.

- **Implemented SMART OPERATIONS framework in support landscape**

Smart operation is Cognizant's own framework and structured way to perform DEBT analysis of incidents, service requests and problem records / change requests to produce the % of different types of debts in the support landscape and proposed solutions through different types of remediation strategies.

Below are some key points of Smart operations approach –

- Structured approach to continuous improvement in the Support services, applying Cognizant's SMART Operation framework (debt analysis & subsequent remediation)
- Attempted to quantify different types of 'debts' based on the Core Systems support team's analysis on Incidents, SRs and PRs during a specific period, associating the same with prescribed remediation strategies, with quantification of the same
- The result is expected to help both Cognizant and Client to plan the road ahead
- Clear actions have been articulated to achieve the goals (some of which will require connected discussions and alignment)
- Envisioned outcome of application of the framework will be linked with the contractual SLAs and KPIs to pass on the benefits to Client

- **Initiative I took and the best practices implemented by me**

1. Redefined the old structure of RCA format by including **5-Why methodology and CAPA analysis**
2. Introducing MS Team across all the technology tower. It's one of the initiatives I took to focus towards seamless digitized movement into Cloud.
3. Implement a framework to **analysis different types of DEBTs and remediation** of Incidents and SR.

- **Involved into BU Level initiatives – 'Domain Focus Initiative'**

The goal of the above initiative is to E2E support for the domain, across the value chain and emphasis on Domain expertise within Communication Media Business Unit

- Drive more domain- centric solutions
- Knowledge Sharing/management
- Drive skill enhancement and trainings, based on domain
- Encourage associates to be more appreciative of domain

> Participated in **Skillathon 2019** as a Mentor and lead a 4 members team to implement an application based on Smart Operation model mentioned above
> Cleared the **AZURE fundamentals and PaaS for developer internal exam**

Future goals

- Complete Azure AZ 300 training and certification
- Complete CSM training and certification

- **05/14/2018 – 01/12/2021**

IBM India Pvt Ltd

Project: Japanese multinational Car manufacturer company
Designation: Senior UI lead and Consultant

Roles and Responsibilities

It is a scratch level **AGILE development** where more than 15 applications will be merged into 5 applications

- Understanding the Wire frames, user requirements and architecture of the application
- Analyzing and understand the functionalities of the application
- Prepare the UI framework and standard folder structure using React
- Analyzing the best approach for React Project configuration and build using **YARN + WEBPACK 4.x**
- Configuration of Foundation UI framework with React.
- Configure React project with of **react-bootstrap and react-router**.
- Exploring and working on application table scalability using **react-table, react-bootstrap-table, list js**.
- **Implement the HYBRID Approach** – Configure **React JS with Spring Boot + Eureka + AXIOM API** with Microservices to help the J2EE team to merge UI code with maven project.
- Involving in implementing the best **CI / CD** approachable structure of project build using VSTS and UCD
- GIT clone, push, commit. Code checking / merge into **VSTS.**
- **Maven** build and deploy on **Liberty Server**.
- Writing test unit test cases for our new REDUX architecture framework. Using Zest cli as TDD platform.
- Handling **JIRA** tasks (Assigning, editing, monitoring)
- Giving solutions to many approaches.
- Moving existing framework to **REDUX** framework.
- Writing and configuring actions , reducers, selectors, saga , constants js files in Redux.
- Writing end to end unit test cases.
- End to End deployment

- **7/01/2014 – 4/30/2018**

IBM India Pvt Ltd

Client: An US Based health care company , USA

Designation: Senior UI and MEAN Stack lead

Roles and Responsibilities
Design and develop web pages using HTML5, CSS3, SCSS, JQUERY. **Details can be found at Page 1, 2**

As a Project Manager my responsibility is to make sure of all the deliverables on time within budget and maintain IBM standard quality. As a project manager, my responsibility is to closely monitor the financials, hours and efforts spend, setting up daily / weekly / bi weekly status call with internal project team and with business, maintaining good relationship with clients, team performance and project closure activities. Creating and maintaining Capacity Planner is one of the important action I perform in every project I manage. I am capable of managing multiple projects at a time and deliver it within timeline. I am responsible to create EWO, PWO, PCR , POCN and get it signed from Client , tracking the financials, updating the CP tool , WSR , Invoicing details etc.
.

Value add and implementing multiple best practices

1. Implemented two automations which reduced more than 350+ tickets /month which saving lots of efforts, time and manual activities.
2. Implemented multiple best practices around the account related to Client Communications, reducing ticket volumes.
3. Implemented **KANBAN** agile methodology in Concur AMS area

Roles and Responsibilities:

1. I had successfully handled and delivered two transitions (Phase 1 and Phase 2) where I
2. Took more than 30+ applications from the clients, took the KT and successfully running
3. The support phase till now.
4. Project team is responsible for END to END application support
5. Team is responsible for major and minor enhancements / implementations
6. Maintaining standard quality of every deliverables to clients
7. Responsible to handle escalations. Ready for any challenges and fix critical issues on time
8. 24*7 availability for any P1 P2 tickets
9. Responsible for building cordial relationships with clients
10. Make sure of innovate new ideas and automation to reduce manual activities and gain client confidence
11. Generate revenue by developing mobile apps

- **7/01/2013-6/31/2014**

IBM India Pvt Ltd

Client: An US Based pharmaceutical company, USA
Application Name: Global Medical Safety (GMS)
Designation: **Senior System Engineer**
Role: UI Lead and IT Support Analyst [Level 2]
Roles and Responsibilities:
Currently working on development and enhancement of multiple SOW's and point release.
Except this I am working as an IT Support analyst providing steady state support for application in the GMS area for applications **SCEPTRE, LCRx, ARGUS, SAETR**.
Also leading and developing the GUI part of two internal applications where one application uses **Struts** and **Hibernate** as framework and another uses **ASP.NET**. UI designed using **HTML5, Advance CSS, JQuery, Java Script, and HTML.**
One of them has successfully deployed and delivered.
Also engaged with internal training process where I give training on different GUI technologies like HTML5, JQuery, Java Script, and CSS3.

- **6/18/2012-6/30/2013**

IBM India Pvt Ltd

Client: An US Based pharmaceutical company, USA
Application Name: Electronic Regulatory Information System (ERIS)
Designation: **Senior System Engineer**
Role: IT Support Analyst [Level 2]
Roles and Responsibilities:
Working as a Support analyst providing support for applications in the **Pharma R&D Global regulatory** Area and supporting the ERIS application

Role Description:

1. As an IT Support Engineer, I have solved investigational or problem tickets raised by the clients using the IBM SCORE.
2. I have written various batch scripts which help automate some of functionalities of ERIS and reduce the time of the function.
3. I have installed and configure Content Server V6.6, Composer, DA, Docbroker with Oracle 11g.
4. I have assisted client with document rendition using Documentum administration and DQL. Also have supported client with Document Check in / Check out, Versioning, Searching, Access, Review / Annotation, Approving, Deletion/Obsolete, NDV and all the other type of issues following proper process. I have worked on ERIS user Account creation.
5. I have done details application monitoring and performance monitoring of the ERIS application weekly basis. This details testing helps us to track the application thoroughly. I have also done Hung Thread Analysis for the application.
6. As an ERIS support member, I first install J&J image for Windows 7 enterprise OS into my system and guide the other support member to image the same in their system.
7. I single handedly support/resolve all the Windows 7 and ERIS compatibility issues and all other software configuration issues for Windows 7 faces by the clients.
8. Support the clients with software installation and configuration and other issues.
9. I have handled installation and configuration and all other issues regarding the software like Adobe 9.5.1, Adobe 10.x, Annodoc V2.2.1.2, ISI Toolbox V6.1, and IBM Score Cross reference which is very important software for ERIS application and has been used extensively by the Client as regular basis.
10. I have tested all kind of software configuration for ERIS in VTL environment.
11. I have knowledge on ISI publisher.
12. I have basic knowledge on IBM Cognos v10.x. Generated Report using IBM Cognos BI Portal and Query Studio.
13. I have handled Client call daily basis with efficiency and also received multiple appreciations from the clients via mail / phone for my support work.

- **5/17/2010 - 6/12/2012**

IBM India Pvt Ltd

Client: DUTCH multinational supermarket and retail company, Netherlands
Designation: **System Engineer**
Roles and Responsibilities: Worked as an application developer providing Portal Development activity, maintenance for the Retail Domain and as well as support for the same.
Role Description:

1. Mostly working on Framework Subsystem. Framework is related to GUI and Business part of the Application.
2. Write and develops the code for business service and the Themes, Skins of the portal.
3. Apart from that WebSphere administration related work i.e. creating pages, labels, Virtual portals,
4. Giving the page access to the user, add portlet(s) to the page, URL Mapping for the portlets, Select appropriate skins for portlets, setting the unique name for the portlets, adding a particular theme and Theme policy to a portal page etc.
5. I have been engaged to develop portlets also.
6. I have involved in knowledge sharing on Software Installations and configurations within the team.
7. I have supported offshore and Onsite team in delivering every client deliverable.

- **11/5/2009 - 5/7/2010**

Intelligroup
Client: An US based car manufacturing company, USA
Designation: **Software Engineer**
Roles and Responsibilities: Worked as a developer for Manufacture Domain.
Role Description:
1>Generating the Barcode (Code39, Code128, UPC-A) for the products using Barcode4J API.
2>After generating the Barcode, report is generated by using iTEXT API.
3>Developing Barcode Save the barcode image (.jpg, .png) as a BLOB into Database. Generating Jasper report using iTEXT, JASSIST, iREPORT.

- **6/22/2009 - 10/30/2009**

Sanguine IT Solutions Pvt Ltd

Client: Internal
Designation: **Software Programmer**
Roles and Responsibilities: Worked as a developer for internal HR Module system.
Role Description:
1>Developing front end using Servlet, JSP, HTML, and Java Script.
2>Database using Oracle 10g.
3>Deploy the web application using Bea Web logic Server

- **1/1/2008 - 4/30/2009**

Hinnovation Research Center Pvt Ltd

Client: Domestic education institutions
Designation: **Software Developer**
Role Description:
1>Developing master screens with OWL and QAF.
2>OWL (Web Ontology Language) shows the options for New, Search, Delete, Edit, Help Topics, refresh and Display Table for all the data coming from database.
3>QAF (Quick Activity Floor plan) shows the options for Save, Update, Cancel buttons and a Text Field To enter the data.
4>QAF also consists of Dynamic Table which was developed using Struts List Backed Form.
5>Developing pages using jsp, html, java script and css as Front-End.
6>Used Apache-ant to build the project.
7>I used JUNIT to test the code.
8>Deployment of the master-module web application using apache-tomcat server.

Education

6/30/2007 Bachelor of Technology in Computer Science and Engineering **(82.40%)**
6/30/2002 Higher Secondary **(75%)**
5/30/2000 Matriculation **(76%)**
